MiniBiz Sales Recording Algorithm

1. Start MiniBiz and set total sales to 0.
2. Display fields for product name, quantity, and price per item.
3. The user enters the sale details and selects Record Sale.
4. Check that the product name is entered and the quantity and price are positive numbers.
5. Multiply quantity by price per item to calculate the sale total.
6. Add the sale details and sale total to the sales list.
7. Add the sale total to the total sales amount.
8. Clear the entry fields so another sale can be recorded.
9. End when the user closes the app.
